EDUCATION

Concordia University

Bachelor of Engineering – Software Engineering

May 2026 (expected)

Montreal, QC

WORK EXPERIENCE

Genetec

System Test Specialist Internship

May 2025 – Aug 2025

Montreal, QC

- Designed and developed an internal testing tool for a new plugin, streamlining complex **API** workflows into an intuitive WebApp.
- Built the tool using **C# .Net WebApi** and **React/TypeScript**, leveraging the Genetec Gelato component library.
- Collaborated with development and QA to refine requirements and ensure the tool aligned with internal workflows.

Genetec

System Test Specialist Internship

January 2024 – April 2024

Montreal, QC

- Tested software for bugs and documented findings and resolutions.
- Used SQL to validate test data, including injection scenarios and validating geographic data against Google Earth.
- Employed MQTT to test new features by sending vehicular IoT data for validation.

PROJECTS

Computer Vision Video Management System (C#, WPF) — Personal Project

January 2026

- Developed a desktop Video Management System (VMS) using **C#** and **WPF** to detect and index suspicious events for later querying.
- Implemented object detection using **OpenCV**, enabling automated identification.
- Designed a modular UI using the **MVVM** pattern for maintainability.

Distributed Logger (C#) — Personal Project

November 2025

- Designed and built a distributed log storage system inspired by Apache Kafka, supporting partitioned, append-only logs.
- Implemented rolling log segments and a custom TCP byte-level protocol with **asynchronous, concurrent I/O** for efficient log ingestion and retrieval.
- Integrated the **Raft** consensus algorithm over **gRPC** using async workflows to coordinate broker nodes, ensuring fault tolerance, strong consistency, and horizontal scalability.

E-Commerce Clothing Platform (C#, React (TypeScript)) — Capstone Project

September 2025

- Led backend development for a full-stack e-commerce platform, defining system architecture, REST API design, and core backend services.
- Built a scalable **ASP.NET Core Web API** backed by **PostgreSQL**, using strict dependency injection and modular design to ensure maintainability and testability.
- Implemented key backend features including JWT-based authentication, email verification, secure image storage and retrieval, and an AI-powered virtual try-on.
- Deployed and self-hosted the platform using **Docker**, **Nginx**, and **Cloudflare**, and validated performance and reliability through load testing with **k6** and **Grafana**.

EXTRACURRICULAR

Vice President of Projects, Google Developer Club

Feb 2026 – Present

- Led multiple development initiatives and coordinated student open source projects.

RELEVANT SKILLS

Programming Languages: C#, C++, Java, TypeScript

Frameworks/Libraries: .NET, React, WPF, ASP.NET Core

Languages: English (Spoken & Written), French (Spoken & Written)

Developer Tools: Docker, Git, GitHub, Postman
